Information and Suggestions to Customers

The world is now facing a SCARCITY OF FOOD PRODUCTS. This is realized more definitely each day as farm products soar to the highest prices ever known. Market gardeners, farmers, and food producers in general cannot supply all that will be needed this year. The National and State Experiment Stations are urging a very heavy planting; but one serious drawback to this is the scarcity of a great many of the ordinary varieties of seed. The demand for seed will probably exceed the supply. If you delay ordering you are taking the chance of not getting half your needs. We are stating to you the true conditions in a spirit of co-operation. Write us at once, sending us your order, and we will use every effort to fill same completely with our "Sterling Quality" Seeds.

The wrinkled varieties are more tender and the seed is more liable to rot and should not be planted when the ground is cold and wet. The late varieties do not require as rich soil as the early and dwarf sizes. Sow in rows 3 to 4 feet apart and about 1 inch apart in the rows, 3 to 4 inches deep. Peas grown as a market crop are never staked, but when the taller sorts are grown for private use they are generally sown in double rows, 6 to 8 inches apart, and staked with brush. For best results all garden peas require good, strong fertile soil.

One quart will plant about 100 feet of drill; 1½ bushels to the acre.

Those marked with a (*) are wrinkled varieties.

A., S. & L. PERMANENT PASTURE MIXTURE

This is a mixture composed of the best varieties of the different perennial Grasses and Clovers blended in the right proportions for giving a fine, heavy growth of pasture throughout the season, and which will last in the ground for many years.

The different varieties of Seeds for this mixture are selected with the view of combining in proper proportions varieties that will start early in the spring and those that will last late in the fall, and also those that will furnish good pasture during the hot, dry periods of summer. It is a mixture that has been highly recommended by expert Agriculturists.

One of the chief objections in the past to prepared mixtures has been that the quality of the different varieties of Seeds has been very inferior.

We can assure our customers that this mixture is made from only the very highest quality of Seeds which the market affords. Sow at the rate of 35 lbs. to the acre.

Price per acre, \$8.00, f. o. b. Portland.

A Descriptive List of

CHOICE FLOWER SEEDS

With General Directions For Cultivation

A rich, sandy loam is the best for most flowering plants. The soil of a good garden should be deep, well pulverized, and if fertilizers are used they should be thoroughly mixed with the soil.

It is best in practically all instances except hardy annuals to start the seed in boxes, preferably a box about 18 x 24 inches and 4 inches deep, using very sandy soil with leaf-mold that will not bake, and provide for drainage by boring some holes in the bottom of the box. It is best not to put any fertilizer in the seed box, since it is only necessary to bring the plants to the third or fourth leaf, when they should be pricked out and reset in another box, in which the soil should be loam mixed with leaf-mold. It is important that the plant be of good size, strong and sturdy, when finally transplanted in the garden.

If the seed be sown directly in the garden, it should be sown in the spring after the soil is well worked and fertilized. When up, the plants must be thinned from two to twelve inches, depending on the variety, otherwise they will be weak and spindling. It is a mistake to leave plants too thick. A common mistake in sowing flower as well as other seeds is covering too deep. As a general rule, cover only to the depth of the thickness of the seeds, or with medium-sized seeds, like Balsams, Zinnias, etc., half an inch or less is the proper depth. Such fine seeds as Portulaca, Nicotiana, etc., need only to be pressed into the soil with a piece of board or palm of the hand. Always press the earth down firmly after sowing all flower seeds, else there is danger of their drying up before the roots can get firm hold of the soil. Seeds of the hardier annuals may be sown where they are to grow; but, as a rule, it is preferable to transplant, as the plants are generally stronger and stand the drought better. During very dry weather, and when the seedlings are first set out, they should be watered frequently. Provide some support for all such annuals as require it.

The weeds should be kept down and the ground loosened often, so that the plants will receive the full benefit of the rains and dews, which they will not if the ground is allowed to become hard and baked.

NASTURTIIUM

A popular flower which is in constant bloom throughout the season, making a better display than almost any other plant. New colors are being developed, and in our list will be found all the best varieties that have been introduced.

Nasturtiums are of the easiest culture and require very little care after the seed is sown, merely weeding and the seed-balls picked off. If these are permitted to mature, the beauty of the plant is soon lost. Plant the seed one inch deep in moderately good soil. The tall sorts are specially adapted for covering unsightly fences or trailing over rocks and rough ground. Hardy annual.

SWEET PEAS

The popularity of Sweet Peas is demonstrated by the many and beautiful varieties that are introduced each year. Our list includes all the best up-to-date varieties.

Sow as early as the ground can be prepared in a deep, rich moist soil, in drills 6 inches deep, covering about 2 inches deep. As the vines grow, fill up the trenches with soil and thin out to about 4 or 5 inches apart. A popular plan at the present time is to sow in double rows with a trellis or a row of brush between.

Newtown Giant Colony Brooder

"BUILT FOR LONG-
TIME SERVICE"

Shaking Grate—sliding door in Deflector raised.

The Great Time, Labor, Fuel and Chick Saver Coal-Burning, Self-Regulating, Simple, Safe and Economical.

Coal is recognized as the safest fuel to use to guard against the burning of property—the Newtown burns coal.

Every part of the Newtown Heater is cast iron with the exception of its heavy sheet metal casing around the fire bowl, which is a *special safety feature*. Air circulates between the heavy sheet metal casing and the hot fire bowl, which prevents over-heating of this part, so that there is no danger of the litter or buildings catching fire. The fire bowl is *not* exposed.

THE STANDARD COLONY BROODER

Self-Feeding, Self-Regulating, Sim-
ple, Safe, Everlasting

Saves Labor, Time and Money!

Broods 100 to 1000 Chicks

ABSOLUTE COMFORT FOR THE CHICKS. It is a well-established fact that every chick is not entirely comfortable in the same temperature—some require a little more heat, while others require less. Under the conditions provided by the Standard Colony Brooder, every chick can seek the precise temperature that suits it best. If it needs plenty of warmth it moves closer to the stove, and if it requires less heat it moves farther away from the stove. They follow the natural inclinations of nature.

IT IS ECONOMICAL, as it burns but three to six cents' worth of coal in a day. In ordinary cool weather it cannot burn more than three cents' worth of coal, and with the weather below freezing it cannot burn more than six cents' worth in a day.

THE INTERNATIONAL SANITARY HOVER

The Sanitary Hover can be used anywhere that there is protection for the chicks from wind and rain. It is not a center heat hover. It is warmest at the outer edge, which causes the chicks to distribute themselves near the curtain and prevents crowding and smothering the chicks.

It is a perfectly ventilated brooding device. It supplies plenty of fresh air for all the chicks, with no drafts. It can be carried around with ease and is ready for use wherever it may be dropped. No carpenter work is required to set it up—no cutting of holes nor building of platforms. All one has to do to set it up is set it down. A simple, safe, convenient, and dependable brooding device.

The Lullaby Brooder

REG. U.S. PAT. OFF.

Get away from the old idea that you should keep fifty chickens in a lot. You will make almost, if not quite, as much profit with twenty-five chickens raised in the "Lullaby" way as with fifty raised in the old-fashioned way.

It is not a question of how many chicks you put together in the spring that tells the profit later. It is "How many did you raise out of every 100 hatched?"

United States Poultry Fence

The United States Poultry Fence is galvanized after weaving and will not rust as Fencing galvanized before weaving.

The United States Poultry Fence has proven the best by test. It has long since established its superiority over other makes, and is in a class by itself. It is built to withstand *use and abuse* and is guaranteed to give satisfaction.

The United States Poultry Fence is strictly a "No-Sag" poultry fence, as the combination of line and mesh wires, closely woven, prevents any lengthening or narrowing between posts. In erecting United States Poultry Fence the line wires permit of being stretched to a high tension, which compels the fence to remain rigid and upright. These features place it a long stride beyond the Hex Mesh Netting, which never fails to narrow and lengthen if you attempt to stretch it to a tension required to prevent sagging.

Banner Root Cutter

No. 7, Exclusively for Poultry

It cuts fast and is easy running. Leaves the feed in fine, brittle, ribbon-like strips that make choking impossible. Fowls large or small can safely eat the feed. The knives are adjustable and made of the very best of steel. An iron gate in bottom of hopper lets dirt and gravel escape before reaching the knives. In this cutter we offer the poultrymen a low-priced, high-grade, nicely finished and mechanically constructed machine. Two to five minutes will cut enough feed for a large flock of fowls.

"Pittsburgh Perfect" Chicken, Rabbit and Poultry Fences

"Here is a combination of 'Pittsburgh Perfect' Fence styles whose field of usefulness and perfect adaptability outclass by far any other fences made for similar purposes."

"They give to poultry quarters, gardens, etc., a smart, up-to-date appearance, and are the most durable and thoroughly satisfactory poultry fence possible to procure. It is unnecessary to use a top board with any of these fences, as we employ an extra heavy top and bottom wire, which also adds greatly to strength. A top board gives the chickens a chance to see how high they have to fly to get over, and if no board is used they will not fly over. For about a foot and a half from the ground the line wires are only an inch apart, while the stay wires are placed either four or six inches apart."

Made in six different heights, offering many economical advantages.

TAKEN FROM "THE PARK & POLLARD CO., YEAR BOOK AND ALMANAC"

The Park & Pollard Co LAY OR BUST—Dry-Mash

When we tell you that Park & Pollard Dry-Mash makes them "lay or bust" every time, at all seasons of the year, we *mean* what we *say*. It is as impossible for a healthy hen to eat "Lay or Bust" and not lay as for half a dozen women to sweep back the tide in Boston Harbor. Not only does it produce eggs at a lower cost than any other feed, but it maintains the birds in better health and does away with more than one-half the labor of caring for them.

Many of the ailments of Poultrydom are directly traceable to improper feeding. Egg eating, feather pulling, too much broodiness, over-fatness, diarrhoea, constipation, crop-bound, slow moulting, pale combs, poor fertility, weak germs, low vitality in young chicks, soft-shelled eggs are all due to improper diet, and we have corrected the tendency to all of them in our mixtures, and have demonstrated that these ailments are largely overcome by the use of Park & Pollard feeds. These points are given constant and careful consideration by us, and the requirements followed out regardless of the cost of the proper materials.

A fluctuating grain market does not mean that high-priced ingredients necessary to the proper balancing of our feeds will be left out of our mixtures; this would be poor economy for you and for us.

Lay or Bust will give you the results you are looking for every day in the year

The Park & Pollard Co SCREENED SCRATCH FEED

Scratch Feed is a supplementary ration; that is to say, the eggs or the growth, are in the Lay or Bust and the growing feed; the Scratch Feed, or hard feed, only serves to balance and fill out the ration.

There is no question that by using Park & Pollard Lay or Bust Feed in connection with most any Scratch Feed you will obtain better results than you have ever gained before, but if you wish to obtain the very highest egg yields and maintain your flock in the highest state of health by all means feed both Lay or Bust and Park and Pollard screened scratch feed.

The Park & Pollard Co GROWING FEED

The use of some other feed than hard grains for the growing chicks is an absolute necessity if you want the chick to come quickly and naturally to an early and rugged maturity.

After the chickens are five days or a week old, provide them with a continuous ration of Park & Pollard Growing Feed, which is made up of a happy combination of the strongest and richest grains and meat foods ground together in the most appetizing form for the chickens. It gives a wide variety to feed upon, and so fully nourishes every part of the growing stock that they are always in good form and well feathered, with unlimited stamina, and they grow evenly and rapidly.

Bowel trouble is unknown unless the heat goes wrong in the heated brooders, and leg weakness never comes if they have outdoor exercise daily. They are in market bigger than last season's four months' birds. Remember well fed chicks are paying chicks.

The Park & Pollard Co BABY BUSTER CHICK FEED

Formerly called "Gritless"

If the chickens consumed the chick feed in the first month of their lives in the quantities they use when from three to five months of age, there might be a little excuse for poultrymen looking for less expensive rations, provided it did not imperil the lives of the youngsters, but when we consider that a pound of the best chick feed will put a chicken beyond the danger period, or up to three weeks of age, what excuse is there for the saving of a quarter of a cent a pound when it endangers the entire season's crop of producers? The trifle you save on one hundred chicks you would lose in the death of one. When you have so much at stake, why use anything but the best?

This feed contains fish as in previous years, as, with each additional season, we have found that fish is a wonderful vitalizer and strength promoter in the youthful days of the chicken's life.

Order it by its name!—"Baby Buster" Chick Feed.

Bath, Me., Feb. 28, 1916.

Gentlemen:—I have been feeding your feed all the year and have had great success. I house my birds in open front houses and feed them according to your system.

Very truly yours,

The Park & Pollard Co.

Gentlemen:—There is no use to question the value of your Growing Feed for young chicks here. I have a flock of 97 R. I. Reds and the smallest weight is 1 lb. and 9 oz. and only 5 weeks old. I think this is pretty good. All your feeds have a large place in my feed room. They cannot be equalled.

Yours truly,
(Signed) ERNEST BARIBEAU.

Gentlemen:—As one who has from time to time used your "Lay or Bust" with excellent results, I would like to ask you for two of your Year Books and Almanacs. They have been to me in the past not only an excellent memo book but a guide and a companion in raising and caring for my birds. Thanking you, I remain

Yours very truly,

TO MODERNIZE YOUR FARM === LOUDENIZE YOUR BARN

The Louden Steel Stall gives the cow the same comfort and freedom of movement she would have in the field.

We Can Fit Up Your Barn Complete With Louden Modern, Sanitary Equipment

Louden equipment makes possible a clean, sanitary barn with a minimum of expense for upkeep.

When cows are transferred from dark, insanitary shelters to light, well ventilated, well equipped barns of the Louden type the milk flow invariably increases from 10 to 25 per cent., and the labor of caring for the herd is reduced by one-third or one-half.

The cost of installing Louden equipment is surprisingly small, and it is just as great an economy for the man with half a dozen head of cows as for the man who has to care for hundreds of animals. The percentage of labor saved is the same, and in either case it is 100 per cent. profitable.

We are prepared to quote you attractive prices on everything for your barn. The items illustrated are only a few products of the largest and most complete line of barn equipment made. Some of these products we carry in stock; others we can secure for you promptly.

Going to Build or Remodel a Barn?

For Dairies, Creameries, Etc.

For cleaning vats, pasteurizers, strainers, cans, pipes, separators, and other articles in your plant that have become gummy or tainted with stale odors by the use of soap, soap powder, or some similar washing compound, there is nothing that accomplishes this task so easily, and at such little expense as Wyandotte Dairyman's Cleaner and Cleanser. A daily washing of the dairy or factory equipment will keep everything sweet and clean!

As you may already know, Wyandotte Dairyman's Cleaner and Cleanser is used by four out of every five butter and cheesemakers and by thousands of milk producers. It is the only cleaner recommended by State Dairy College Authorities. We know you will not be without it once you give it a thorough trial, and know what it does, and how little it costs to use.

can be used to advantage in cases where a combined abrasive and cleaner are needed

Wyandotte Detergent can be used to advantage in cases where a combined abrasive and cleaner are needed.

Wyandotte Detergent is quite different in its nature from the "Wyandotte" Dairy or Sanitary Cleaner. It contains a fine, flaky grit which makes it an abrasive and scourer. It also has the freshening and sweetening properties of the other "Wyandotte" products.

For cleaning marble, tile, painted walls, and other similar surfaces Wyandotte Detergent is unsurpassed. It scours clean, but does not scratch, mar or dull.

Rusty ice cream cans are easily scoured clean with Wyandotte Detergent, and although Wyandotte Detergent is not a metal polisher, for cleaning corroded iron and brass pipes, railings, dirty sinks, urinals, cuspidors and the like it has no equal.

The Skinner System of Irrigation

There are times in nearly every growing season when a crop could be saved or its value doubled if the grower could call down from the skies a soft, gentle rain of sufficient duration to abundantly water the crop. With the Skinner System of Irrigation the rainfall is at the command of the grower.

Not only will the Skinner System protect, against drought but it will distribute the water with a uniformity not otherwise possible. The moisture is applied in the way which is most advantageous to the soil and to the crop, without injury to the plant. Commercial fertilizers, insecticides and fungicides can be distributed through the Skinner System. All of this is accomplished with a minimum of labor. The early maturity of the crop, securing the advantage of better prices, and the more luxuriant and uniformly developed growth mean greater returns per acre.

Sheep's Head Brand Pulverized Sheep Manure

A complete natural fertilizer, supplying all the necessary plant food elements—Nitrogen, Phosphoric Acid and Potash—in combination with organic matter or humus, and it is this natural combination that produces the peculiar action and effect in the soil which can only be had from animal manures. It can be used without fear of weeds and foreign grasses that always follow the application of ordinary stable manures.

Sheep manure is probably more largely used in greenhouse growing of flowers and vegetables for market than any other fertilizer, because it is safe, and can be relied upon for quick, sure results. It is unequalled for either dry or liquid top-dressing, especially for carnations, chrysanthemums, asters, and other hardy floral crops.
